Education

University of Cincinnati

Expected May 2028

Bachelor of Science in Computer Science (GPA: 3.88 / 4.00)

Cincinnati, OH

- **Relevant Coursework:** Artificial Intelligence, Computer Networks, AWS, Technical & Scientific Writing

Experience

Research Assistant

Aug 2025 – Dec 2025

Feng Chia University

Taichung, TW

- Fine-tuned a **Vision Transformer (ViT)** with transfer learning on a 38-class plant disease classification task, applying data augmentation and hyperparameter tuning across a large-scale leaf image dataset
- Built an end-to-end **PyTorch/Hugging Face Transformers** pipeline and diagnosed class-imbalance and edge-case failures through systematic error analysis, improving model robustness and reproducibility

Digital Technology Solutions Intern

May 2025 – Aug 2025

University of Cincinnati

Cincinnati, OH

- Validated a production **Angular** application against **CAD** plan documents and built reusable **UI components** integrated with **MapsIndoors**, catching mapping inconsistencies before release and cutting duplicate implementation work across features.
- Provided third-level production support in an **Agile** environment, debugging and resolving issues to maintain system stability and reliability

Software Applications Intern

Jan 2025 – Apr 2025

Danlaw

Novi, MI

- Shipped new pages and features for a production **Angular** application and partnered with engineers to troubleshoot and debug across the stack, contributing to on-time delivery of team milestones
- Authored and maintained **OpenAPI** documentation for internal APIs, improving developer onboarding and cross-team clarity

Projects

Kortex – Full Stack Document RAG Platform | *Angular, FastAPI, LangChain, ChromaDB, Docker, Python*

- Developing a full-stack Retrieval-Augmented Generation (RAG) application for natural-language Q&A over user-uploaded documents, with planned streamed LLM responses and source citations
- Built a document ingestion and retrieval pipeline using text chunking, embeddings, and persistent vector storage in ChromaDB, integrated with LangChain and an async FastAPI backend

Momentum – Business Operations & Manufacturing Analytics Platform | *Python, MySQL, Pandas, Power BI*

- Designing a relational MySQL database and building a Python/Pandas ETL pipeline to extract, clean, and transform over 5,000 transactional records across products, orders, and suppliers, engineering metrics such as profit margin, inventory turnover, and a custom Supplier Risk Score
- Developing a demand forecasting model and What-If Reorder Simulator to flag potential inventory shortages, then build a 3-page Power BI dashboard translating findings into actionable business insights and recommendations

Atlantis— Secure Real-Time Collaborative Messaging Platform | *Node.js, Express, MongoDB, Azure*

- Collaborated in a team to design and develop a full-stack real-time messaging platform using Node.js and Express, with implementation of secure authentication, role-based access control, and group chat functionality backed by MongoDB Atlas
- Designed a cloud deployment architecture using Microsoft Azure, with integration of RESTful APIs and a CI/CD pipeline via GitHub Actions to support automated deployment and scalable development workflow in an agile environment

Technical Skills

Languages: Python, Java, SQL, C++, C, JavaScript, TypeScript, MATLAB

Frameworks and Libraries: Angular, FastAPI, Node.js, Express.js, LangChain, PyTorch, Scikit-learn, Pandas, NumPy

Databases and Data: MySQL, MongoDB, ChromaDB, Power BI, Excel, Matplotlib

Cloud and DevOps: AWS, Microsoft Azure, Docker, Git, GitHub, Jira, Actions

Business Systems : Dynamics NAV Connector, Power Automate
