EDUCATION

University of Cincinnati

Bachelor of Science in Computer Science

- GPA: 3.85/4.00

Cincinnati, OH

May 2028

EXPERIENCE

Computer Vision Research Assistant

Aug 2025 – Dec 2025

Feng Chia University

Taichung, TW

- Designed and fine-tuned a **Vision Transformer (ViT)** model for multi-class plant disease classification, leveraging transfer learning on a large-scale leaf image dataset to capture fine-grained visual patterns
- Built an **Deep Learning** pipeline in **PyTorch** and **Hugging Face Transformers**, including data preprocessing, augmentation, model training, hyperparameter tuning, and evaluation workflows across 38 disease classes
- Achieved **99.78%** test accuracy with strong generalization across all classes, and conducted detailed performance analysis to identify edge cases, diagnose class imbalance issues, and improve model robustness

Digital Technology Solutions Worker

May 2025 – Aug 2025

University of Cincinnati

Cincinnati, OH

- Validated **Angular** web application against **CAD** plan documents, integrating **MapsIndoors** and resolving inconsistencies, improving **front-end reliability** and **testing accuracy**
- Developed reusable **UI components**, enhancing **responsiveness** and **usability** while aligning with project requirements and gaining hands-on experience in **modern web development**
- Provided third-level support in an **Agile** environment, debugging code and optimizing performance to maintain high **system stability**

Software Applications Intern

Jan 2025 – Apr 2025

Danlaw

Novi, MI

- Enhanced an **Angular** application by creating new pages, modifying functionalities, and implementing **responsive, user-friendly features**, improving **front-end performance** and **usability**
- Authored and maintained API documentation using **OpenAPI**, ensuring clarity and accessibility for **developers** and cross-functional teams
- Collaborated with team members to troubleshoot, debug, and deliver high-quality solutions, contributing to **successful project outcomes** and **workflow efficiency**

PROJECTS

Atlantis — Secure Real-Time Collaborative Messaging Platform | *Node.js, Express, MongoDB, Azure, Docker*

- Collaborating in a team to design and develop a full-stack real-time messaging platform using Node.js and Express, with planned implementation of secure authentication, role-based access control, and group chat functionality backed by MongoDB Atlas
- Designing a cloud deployment architecture using Microsoft Azure and Docker, with planned integration of RESTful APIs and a CI/CD pipeline via GitHub Actions to support automated deployment and scalable development workflow in an agile environment

Vision Transformer (ViT) for Plant Disease Detection | *Python, PyTorch, Hugging Face Transformers*

- Fine-tuned a Vision Transformer (ViT) model using PyTorch and Hugging Face Transformers for multi-class plant disease classification, leveraging transfer learning on a large-scale dataset to capture fine-grained visual patterns
- Built an end-to-end computer vision pipeline including data preprocessing, augmentation, training, evaluation, and performance analysis, ensuring reproducible experimentation across 38 disease classes

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL, HTML/CSS, MATLAB

Frameworks & Libraries: Angular, PyTorch, Scikit-learn, NumPy, OpenCV, Pandas, Matplotlib, OpenAPI, Node.js, Express.js, Azure, MongoDB, Docker

Certifications: AWS Cloud Practitioner, Supervised Machine Learning, Performing a Technical Security Audit and Assessment
